## AtlantisFiber™ Announces Development Agreement with W Dusk Energy Group

Vancouver, B.C., June 12, 2019 - It's our great pleasure to announce the signing of an agreement between [AtlantisFiber™](#) and [W Dusk Energy Group](#) that will see our two companies collaborate on various infrastructure projects throughout Canada and abroad.

W Dusk Energy Group is a recognized leader in the design, development and commissioning of renewable energy projects involving First Nations and remote communities. The Agreement will open new opportunities for the deployment of the innovative additive technology that Atlantis has developed for use in the cement and concrete industries.

Our recent cooperation has led to [a collaboration with the Chawathil First Nation in British Columbia](#) that is currently underway and scheduled to be completed by mid to late July.

This project marks the beginning of a broad cooperation which will include concrete housing applications in remote and greatly underserved parts of Canada as well as improving road conditions in these communities by incorporating AtlantisFiber™ technologies.

Not only will this be a much-welcomed service to these communities, but what we will learn from these applications will be adapted to fit similar communities within North America and globally.

The W Dusk Energy Group is an Indigenous business that has worked throughout Canada to strengthen community development by harnessing the energy of the sun to foster economic growth, and infrastructure development. Currently, W Dusk Group has built the two largest community owned solar projects in British Columbia: Skidegate 100 kW; and Lower Nicola Indian Band 88.1 kW. The team will be completing Manitoba's first utility megawatt solar farm with the Fisher River Cree Nation in July of 2019.

"Canadian cleantech companies are working together to bring global solutions to local communities", noted David Isaac, President and CEO of W Dusk Energy Group. "Our partnership with AtlantisFiber™ has cross sectoral applications in energy, infrastructure and transportation that could prove significant in the years ahead."
